TO THE READER

This book is written for readers who are meeting the subject for the first time. It assumes no earlier knowledge. Every new word is explained when it first appears, and the book moves slowly wherever an idea is new or difficult.

Beside most paragraphs you will find a note in the narrow column at the edge of the page. A note in italics gives the main point of the paragraph in one line. Read these notes first to see the shape of a chapter, and again when you review.

A word in **bold type** is a new term. It is shown in bold once, where it is first explained, and its meaning is repeated in the narrow column. After that the word appears in ordinary type. Italics are used for emphasis, for foreign words and for the titles of books.¹

Where an everyday word has a special meaning here, a note marked "Word in use" says so. Where an idea is both new and hard, a note reads "Go slowly here", and the text slows down with it.

HOW A CHAPTER RUNS

A chapter opens with a puzzle, then builds its ideas one section at a time. Each section ends with a short recap. The chapter closes with a summary, a problem to think through, the common mistakes people make, a true account from history, and review questions. Questions are numbered, such as 7.1, and their answers are collected at the back of the book.

When a chapter points to another part of the book, it names the chapter and the section, for example Chapter 3, section 3.2. Use the Contents to find it. At the back you will find a glossary of every term, the answers to the questions, a list of further reading, and an index.

This book teaches An Elementary Introduction to Management one idea at a time, from the very beginning.

The narrow column beside the text holds short notes.

Key term. A new word, shown in bold where it first appears, with its meaning in one line.

A bold word is a new term, and its meaning waits beside it.

Some everyday words have a second, special meaning in this subject.

Each chapter has the same shape, so you always know where you are.

Chapters refer to one another by name, never by page.

¹ A footnote gives a side point that would interrupt the main argument. Footnotes are numbered within each chapter and appear at the foot of the page.

CHAPTER I

What Management Is

*What becomes easier when the manager names the problem
precisely?*

*A first-year reader meets the chapter through a concrete
management question. The ideas move from plain language to
precise terms. The running case supplies recorded facts for
application. The historical case provides a dated context.*

* * *

1.1 WHY ORGANISATIONS NEED MANAGEMENT

The section begins with the practical question behind why organisations need management.

The section covers organisations and their aims purpose of management importance of management as connected parts of one management question.

Organisation gives this paragraph its precise focus.

Organisation. a group of people who work together in a planned way to reach an aim that one person could not reach alone

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Employee gives this paragraph its precise focus.

Employee. a person who is paid by an organisation to do work for it

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Why Organisations Need Management is easier to understand when the reader moves from the concrete case to the general rule.

Before moving on, the reader should be able to state the main point of why organisations need management in plain words.

Suppose a manager must deal with why organisations need management. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Organisation** . a group of people who work together in a planned way to reach an aim that one person could not reach alone. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

Before moving on. The section has moved from a practical question to a precise rule, then to an application and a limit. The definition should remain connected to the evidence.

1.2 DEFINING MANAGEMENT

Suppose a manager must deal with defining management. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

At the centre of the discussion is **Management**, the work of using the resources of an organisation to reach its aims, through four connected functions. 1.3 RESOURCES AND RESULTS

Suppose a manager must deal with resources and results. The first task is to identify the facts that describe the situation. Position at 1 January 2026: 14 people (the owner and 13 employees); shop floor 2,400 square feet; rent Tk 200,000 per month. Results for 2025: sales Tk 18,600,000; profit Tk 1,240,000. Resources at 31 December 2025: people, 14; money, cash reserve Tk 1,500,000; materials, stock held at cost Tk 6,200,000; premises, the rented shop; information, a daily sales ledger and a stock list kept on a spreadsheet. Record of the four functions for 2025: on 8 December 2024 the owner wrote the 2025 sales plan, Tk 19,000,000 (planning); on 2 January 2025 he assigned each product section to a section leader (organising); a staff meeting was held every Monday at 9:30 (leading); sales were compared with the plan at the end of each month (controlling). Outcome: sales Tk 18,600,000 against the plan of Tk 19,000,000.

Match each fact to the definitions and compare the conditions, alternatives, responsibilities or results that the record provides. Conclusion. State only what the facts support. Check. Identify any conclusion that would require information not contained in the case.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

* * *

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The final questions return to the chapter's definitions and applications.

SUMMARY

The chapter began with what management is. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

01.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

01.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Josiah Wedgwood's pottery works at Etruria, Staffordshire, opened 1769: planned division of work, set standards and close checking of quality under one managing owner. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

2.1 LEVELS AND TYPES OF MANAGERS

The section begins with the practical question behind levels and types of managers.

The section covers three levels of managers functional and general managers as connected parts of one management question.

Top manager gives this paragraph its precise focus.

Top manager. a manager at the highest level, who sets the direction and is responsible for the whole organisation

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Middle manager gives this paragraph its precise focus.

Middle manager. a manager between top managers and first-line managers, who turns the direction into plans for one part of the organisation

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

First-line manager gives this paragraph its precise focus.

First-line manager. a manager at the lowest level, who directs employees who do the daily work and does not manage other managers

The definition connects the term to a concrete management fact.

Suppose a manager must deal with skills managers need. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Functional manager** . a manager responsible for one kind of work, such as buying or accounts, across the organisation. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **General manager** . a manager responsible for all the kinds of work of a unit, such as a branch. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Levels and Types of Managers is easier to understand when the reader moves from the concrete case to the general rule.

Before moving on, the reader should be able to state the main point of levels and types of managers in plain words.

The section begins with the practical question behind skills managers need.

The section covers technical, human and conceptual skills skills in the classic and the contemporary view as connected parts of one management question.

Functional manager gives this paragraph its precise focus.

Functional manager. a manager responsible for one kind of work, such as buying or accounts, across the organisation

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

General manager gives this paragraph its precise focus.

General manager. a manager responsible for all the kinds of work of a unit, such as a branch

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Technical skill gives this paragraph its precise focus.

Technical skill. the ability to use the methods, tools and knowledge of a particular kind of work

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

SUMMARY

The chapter began with managers: levels, skills and standing. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

02.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

02.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Robert L. Katz, 'Skills of an Effective Administrator', Harvard Business Review, 1955: the three-skill view, drawn from his observation of managers. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

The history is evidence for a management question, not a replacement for the general rule.

SOURCES

The named works and historical sources in the catalogue entry provide fuller context. The chapter uses brief attribution and avoids long quotations so that the main explanation remains readable.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

3.1 EARLY IDEAS AND SCIENTIFIC MANAGEMENT

The section begins with the practical question behind early ideas and scientific management.

The section covers why early industry needed new methods scientific management as connected parts of one management question.

Scientific management gives this paragraph its precise focus.

Scientific management. a method that studies each task by measurement, finds the best way to do it and trains employees in that way

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Time study gives this paragraph its precise focus.

Time study. the careful timing of each step of a task to find out how long the work should take

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Administrative management gives this paragraph its precise focus.

Administrative management. a view that studies the whole organisation and seeks general principles for managing it

The definition connects the term to a concrete management fact.

Suppose a manager must deal with early ideas and scientific management. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Scientific management** . a method that studies each task by measurement, finds the best way to do it and trains employees in that way. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

Before moving on, the reader should be able to state the main point of management science, systems and contingency in plain words.

Early Ideas and Scientific Management is easier to understand when the reader moves from the concrete case to the general rule.

At the centre of the discussion is **Management science approach** . the use of mathematical models and measured data to solve managerial problems. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **System** . a set of connected parts that work together and receive inputs from, and give outputs to, their surroundings. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

At the centre of the discussion is **Contingency approach** . the view that the best way to manage depends on the situation. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

Before moving on. The section has moved from a practical question to a precise rule, then to an application and a limit. The definition should remain connected to the evidence.

WORKED CASE

Case file, illustrative. Case file, illustrative. Meghna and Sons, Dhanmondi, Dhaka; owner Harun Meghna; 13 employees and the owner at 1 December 2025. Time study of 10 November 2025 (by Imran Meghna): packing a parcel of three books, ten parcels timed for each of three methods; averages per parcel: method A 9 minutes, method B 7 minutes, method C 6 minutes. Method C was adopted on 1 December 2025; the orders and parcels section packs 40 parcels each day, so the saving is 3 minutes x 40 = 120 minutes each day against method A. Conflicting orders on 15 December 2025: a shop assistant received different orders from the stationery section leader and from the shop floor manager at the same time; shelving of 300 items was delayed by 2 hours; from 16 December 2025 each assistant receives orders from one section leader only. Reorder rule of 20 December 2025 (Rubel Hossain): a school notebook sells 60 a day and delivery takes 5 days, so the shop reorders when stock falls to 300 notebooks. The same rule is not used in the January rush, when daily sales are higher.

Match each fact to the definitions and compare the conditions, alternatives, responsibilities or results that the record provides. Conclusion. State only what the facts support. Check. Identify any conclusion that would require information not contained in the case.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

* * *

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

The final questions return to the chapter's definitions and applications.

SUMMARY

The chapter began with how management thought developed. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

03.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

03.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Frederick W. Taylor's work at Bethlehem Steel, Pennsylvania, 1898 to 1901, on handling pig iron and on shovelling, and the criticism it met; use only facts that sources agree on and date every figure. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

SOURCES

The named works and historical sources in the catalogue entry provide fuller context. The chapter uses brief attribution and avoids long quotations so that the main explanation remains readable.

CHAPTER IV

Environment, Ethics and Social Responsibility

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

4.1 INTERNAL AND EXTERNAL ENVIRONMENT

The section begins with the practical question behind internal and external environment.

The section covers environment of an organisation internal and external environment compared as connected parts of one management question.

Environment gives this paragraph its precise focus.

Environment. all the forces, inside and outside an organisation, that can affect how it works and what it achieves

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Internal environment gives this paragraph its precise focus.

Internal environment. the people, structure, rules and resources inside an organisation that a manager can change directly

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

External environment gives this paragraph its precise focus.

External environment. the forces outside an organisation that affect it and that a manager cannot control directly

The definition connects the term to a concrete management fact.

Suppose a manager must deal with internal and external environment. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **Plan** . a written or agreed description of what is to be done, by whom, by when and with what resources. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

5.2 TYPES OF PLANS

Suppose a manager must deal with types of plans. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Standing plan** . a plan made once and used again and again for situations that recur. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The final questions return to the chapter's definitions and applications.

SUMMARY

The chapter began with planning. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

05.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

05.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Eastman Kodak: its engineer Steven Sasson built a digital camera in 1975, the company's plans kept its film business at the centre, and Kodak filed for bankruptcy protection on 19 January 2012. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

CHAPTER VI

Objectives and Management by Objectives

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

SUMMARY

The chapter began with objectives and management by objectives. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

The final questions return to the chapter's definitions and applications.

THINK IT THROUGH

06.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

06.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Peter F. Drucker, *The Practice of Management* (1954), which named management by objectives, and the objectives that Hewlett-Packard set in 1957; use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

SOURCES

The named works and historical sources in the catalogue entry provide fuller context. The chapter uses brief attribution and avoids long quotations so that the main explanation remains readable.

CHAPTER VII

Decision Making

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

* * *

7.1 THE DECISION-MAKING PROCESS

The section begins with the practical question behind the decision-making process.

The section covers steps of the rational decision-making process as connected parts of one management question.

Decision gives this paragraph its precise focus.

Decision. a choice made between two or more alternatives to reach an aim

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Decision making gives this paragraph its precise focus.

Decision making. the process of recognising a problem or chance, finding alternatives and choosing one

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Decision maker gives this paragraph its precise focus.

Decision maker. the person or group that makes the choice

The definition connects the term to a concrete management fact.

Suppose a manager must deal with the decision-making process. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Decision** . a choice made between two or more alternatives to reach an aim. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

7.2 ELEMENTS AND CONDITIONS OF A DECISION

Suppose a manager must deal with elements and conditions of a decision. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Criterion** . a standard used to judge the alternatives, such as cost or risk. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **Certainty** . a condition in which the decision maker knows the result of each alternative. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Alternative gives this paragraph its precise focus.

Risk, a condition in which the result of each alternative is not known but its probability is known

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Uncertainty gives this paragraph its precise focus.

Uncertainty, a condition in which neither the result nor the probability of each alternative is known

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Organisation structure gives this paragraph its precise focus.

Organisation structure. the way in which the tasks, people and lines of reporting of an organisation are arranged

The definition connects the term to a concrete management fact.

Suppose a manager must deal with meaning, nature and purpose. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Organising** . arranging the work, people and resources of an organisation so that plans can be carried out. What organising is The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **Organisation chart** . a diagram that shows the parts of an organisation, the levels and who reports to whom. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

WORKED CASE

Case file, illustrative. Case file, illustrative. Meghna and Sons, Dhanmondi, Dhaka; owner Harun Meghna. Organising record of 1 March to 1 April 2026, after the decision of 21 January 2026 to begin online ordering. Work listed: buying; selling in the shop; orders and parcels; accounts; online sales. Structure at 1 March 2026 (14 people): owner; three managers (Imran Meghna, purchasing, with 1 assistant; Nasrin Akter, shop floor; Rubel Hossain, accounts, with 1 assistant); four section leaders under Nasrin Akter (school books with 2 assistants; general books with 1; stationery with 1; orders and parcels with none). Rule in force: every purchase order above Tk 20,000 needs the owner's signature. Informal organisation: since 2024 five employees (two section leaders and three assistants) cover one another's shifts by agreement, which is not on the chart. From 1 April 2026 three people join: Farhan Meghna as online manager at Tk 55,000 a month, and two online assistants at Tk 22,000 a month each; extra pay Tk 99,000 a month, Tk 1,188,000 a year; total 17 people. Situational factors recorded: size grew from 14 to 17; a website was added; the 2027 curriculum change is expected. Design in use: mostly bureaucratic (written rules, signatures), with more discretion for section leaders on shelf layout.

SUMMARY

The chapter began with organising: process and structure. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

08.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

These questions ask for application rather than a memorised phrase.

08.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

IN HISTORY

The chapter's historical case concerns Daniel C. McCallum, general superintendent of the New York and Erie Railroad, and the organisation chart drawn for it in 1855, to deal with long lines and many employees. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

The history is evidence for a management question, not a replacement for the general rule.

SOURCES

The named works and historical sources in the catalogue entry provide fuller context. The chapter uses brief attribution and avoids long quotations so that the main explanation remains readable.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

REVIEW QUESTIONS

08.1 In your own words, what is the central management idea of this chapter?

The final questions return to the chapter's definitions and applications.

08.2 Give one concrete example from a small organisation that illustrates the central idea.

CHAPTER IX

Span, Departments, Authority and Coordination

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

Staff authority. the right to advise and serve line managers without directing their subordinates

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

Before moving on. The section has moved from a practical question to a precise rule, then to an application and a limit. The definition should remain connected to the evidence.

9.4 CENTRALISATION AND DECENTRALISATION

Suppose a manager must deal with centralisation and decentralisation. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Functional authority** . the limited right of a specialist to direct others in one matter that falls in his or her field. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

SUMMARY

The chapter began with span, departments, authority and coordination. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to

concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

09.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

These questions ask for application rather than a memorised phrase.

09.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

IN HISTORY

The chapter's historical case concerns General Motors in the 1920s: Alfred P. Sloan's organisation study of 1920 and the policy of decentralised operations with central control of finance and policy. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

The history is evidence for a management question, not a replacement for the general rule.

REVIEW QUESTIONS

09.1 In your own words, what is the central management idea of this chapter?

Historical evidence needs its original setting before it is applied to a modern organisation.

09.2 Give one concrete example from a small organisation that illustrates the central idea.

The final questions return to the chapter's definitions and applications.

PAUSE AND CHECK 09.P1 What fact or condition should be checked before applying the chapter's main rule?

CHAPTER X

People, Motivation and Creativity

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

SUMMARY

The chapter began with people, motivation and creativity. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

The final questions return to the chapter's definitions and applications.

THINK IT THROUGH

10.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

10.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns 3M under William L. McKnight: the 1948 rule that technical staff may spend part of their time on their own projects, and the Post-it note that grew from such work from 1974 to 1980. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

Leadership

What becomes easier when the manager names the problem precisely?

A first-year reader meets the chapter through a concrete management question. The ideas move from plain language to precise terms. The running case supplies recorded facts for application. The historical case provides a dated context.

11.1 LEADERSHIP AND MANAGEMENT COMPARED

The section begins with the practical question behind leadership and management compared.

The section covers leadership and how it differs from management as connected parts of one management question.

Leadership gives this paragraph its precise focus.

Leadership. the process of influencing people so that they work willingly towards a common aim

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Leader gives this paragraph its precise focus.

Leader. a person who influences others to follow, whether or not he or she holds a managerial position

The definition connects the term to a concrete management fact.

The term is useful when its meaning is tested against evidence and its limits are recognised.

Power gives this paragraph its precise focus.

Power. the ability to influence the behaviour of others, whether or not the right to do so is formally given

The definition connects the term to a concrete management fact.

Suppose a manager must deal with leadership and management compared. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Leadership** . the process of influencing people so that they work willingly towards a common aim. Leadership and how it differs from management The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

Before moving on. The section has moved from a practical question to a precise rule, then to an application and a limit. The definition should remain connected to the evidence.

11.2 POWER AND AUTHORITY BASES

Suppose a manager must deal with power and authority bases. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

At the centre of the discussion is **Reward power** . power that comes from the ability to give things that others value. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

Continuum record: until 2025 the owner decided the opening hours and told the staff. On 5 February 2026 he put the question of closing at 20:00 or 21:00 to all 13 employees; 9 of 13 chose 21:00; the owner kept 21:00 for a trial of three months and set the review for 5 May 2026. Power record: legitimate, the owner's position; reward, the monthly Tk 1,000 section bonus; coercive, one written warning issued in 2025; expert, Imran Meghna's knowledge of publishers and supply; referent, Nasrin Akter, whom shop assistants consult first. Emotional intelligence record: on 24 February 2026 a customer complained about a wrong textbook edition; Nasrin Akter exchanged the book the same day and recorded the cause; no repeat in the next 30 days. Transformational leadership: on 2 March 2026 the owner issued a written aim to all employees: any book in Dhaka within 24 hours. Coaching: from 10 March 2026 Nasrin Akter held one hour a week with each of the 2 newest assistants. Super leadership: from 1 March 2026 the school-books section leader sets the weekly plan of her section without approval.

SUMMARY

The chapter began with leadership. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

THINK IT THROUGH

11.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

These questions ask for application rather than a memorised phrase.

11.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

IN HISTORY

The chapter's historical case concerns Ernest Shackleton and the Imperial Trans-Antarctic Expedition, 1914 to 1917: the loss of the *Endurance* and the return of all members of the party. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

The history is evidence for a management question, not a replacement for the general rule.

SOURCES

The named works and historical sources in the catalogue entry provide fuller context. The chapter uses brief attribution and avoids long quotations so that the main explanation remains readable.

Historical evidence needs its original setting before it is applied to a modern organisation.

The chapter keeps its source trail short and tied to the ideas it defines.

The section begins with the practical question behind requirements and barriers.

The section covers requirements of effective control barriers to successful control as connected parts of one management question.

Feedback control gives this paragraph its precise focus.

Feedback control. control applied after work is finished, to learn from the results

At the centre of the discussion is **Feedforward control** . control applied before work begins, to prevent a problem by checking inputs and plans. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

At the centre of the discussion is **Concurrent control** . control applied while work is being done, to find and correct a problem at once. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

The practical use follows from the definition. A manager should not treat a familiar word as sufficient evidence. The manager identifies the relevant record, compares it with the meaning of the term, and then asks what further information is needed. This keeps the management concept tied to observable work.

The practical question is what a manager would notice first. The answer begins with the information already available: people, resources, records, timing, results, or the stated arrangement. The manager then separates the relevant fact from assumptions that have not been established. This is important because a management idea is useful only when it can guide attention to a real feature of work.

Before moving on. The section has moved from a practical question to a precise rule, then to an application and a limit. The definition should remain connected to the evidence.

12.4 REQUIREMENTS AND BARRIERS

Suppose a manager must deal with requirements and barriers. The first task is to identify the facts that describe the situation. The next task is to connect those facts with the management idea being taught. The final task is to consider the conditions under which the idea may not give a complete answer. This order gives a beginner a stable way to read the subject.

The catalogue groups these ideas together because they answer related questions. A reader can therefore ask what the idea is, why it exists, how it works in a real organisation, and where it may fail. The running case supplies the concrete setting; the general explanation supplies the rule. Neither should be read without the other.

At the centre of the discussion is **Feedback control** . control applied after work is finished, to learn from the results. The idea gives the manager a precise vocabulary for the situation. The reader should first identify the recorded fact, then ask why the term fits it, and finally check what the term does not establish. For Meghna and Sons, the documented case provides the setting.

At the centre of the discussion is **Monitoring**, the regular watching of performance to see whether work is going as planned. The idea gives the manager a precise vocabulary for the situation. WORKED CASE

Case file, illustrative. Case file, illustrative. Meghna and Sons, Dhanmondi, Dhaka; owner Harun Meghna. Sales objective for 2026: Tk 20,460,000. Monthly standard: Tk 1,705,000. Results: January 2026 Tk 1,610,000 (deviation Tk -95,000, -5.6%); February Tk 1,540,000 (Tk -165,000, -9.7%); March Tk 1,790,000 (Tk +85,000, +5.0%). First quarter: standard Tk 5,115,000; actual Tk 4,940,000; deviation Tk -175,000 (-3.4%). Stock write-off standard: Tk 150,000 a year, Tk 12,500 a month. Corrective action: the Book of the Week shelf (from 2 March 2026) was extended from one section to all three product sections on 15 March 2026. Feedforward: on 20 December 2025 the stock of the rush titles was checked against the order list before the January rush. Concurrent: a daily till count at 21:00 by the accounts assistant. Feedback: a monthly review on the 5th of the next month. Barriers recorded: the new daily till count form met resistance in the first two weeks; only sales, and not returns, were measured in January. Link to planning: the first-quarter deviation went to the plan review of 5 April 2026.

Situation. Identify the recorded facts. Question. Select the relevant chapter concepts. Reasoning. Match each fact to the definitions and compare the conditions, alternatives, responsibilities or results that the record provides. Conclusion. State only what the facts support. Check. SUMMARY

The chapter began with controlling. It defined the assigned terms, applied them to the running case, and considered the conditions that limit their use. The main habit is to move from evidence to concept, from concept to comparison, and from comparison to a supported conclusion.

The worked case applies several chapter ideas to one documented set of facts.

The case is examined through situation, question, reasoning, conclusion and check.

The chapter joins its definitions, examples and limits into one management framework.

These questions ask for application rather than a memorised phrase.

Most errors come from confusing a term with an everyday meaning or ignoring the limits of a rule.

The historical case gives a dated setting in which the chapter's ideas can be examined.

The history is evidence for a management question, not a replacement for the general rule.

Historical evidence needs its original setting before it is applied to a modern organisation.

The final questions return to the chapter's definitions and applications.

THINK IT THROUGH

12.T1 A small organisation records a situation that resembles this chapter's main problem. What should the manager identify first?

12.T2 A manager applies a familiar rule without checking its conditions. What should the manager revisit?

WHERE PEOPLE GO WRONG

A reader may use a familiar word without its management meaning, treat one example as universal, or describe a result without connecting it to the relevant process. The correction is to define the term, identify the evidence, apply the principle, and check the conditions that limit it.

IN HISTORY

The chapter's historical case concerns Barings Bank, Singapore and London: the collapse announced on 26 February 1995 after unauthorised trading by one employee and the failure to separate trading from settlement. Use only dated facts that sources agree on. This account is used only to illuminate the management idea. It does not turn the historical event into a model for every organisation. The relevant lesson is the documented connection between the event and the management question raised in this chapter.

The case should also be read with its limits. Historical organisations operated under conditions that may differ from a modern organisation in law, technology, scale, and social expectations. A reader can therefore use the case to understand how an idea developed or appeared in practice while avoiding claims that the same arrangement must work today.

REVIEW QUESTIONS

12.1 In your own words, what is the central management idea of this chapter?

12.2 Give one concrete example from a small organisation that illustrates the central idea.

PAUSE AND CHECK 12.P1 What fact or condition should be checked before applying the chapter's main rule?

APPENDIX A

Maths You Will Use

This appendix is a compact reference for the arithmetic used throughout the book.

It gives small examples that can be checked by hand. It is a reference, not a lesson.

a simple line graph with labelled axes and one m

FIG. A.1. a simple line graph with labelled axes and one marked point

Percentages and Percentage Change is handled by a short procedure and a check.

Percentage gives the numerical idea its exact meaning.

Percentage. a number written as a part of 100, shown with the sign %

Percentage change gives the numerical idea its exact meaning.

Percentage change. the change between an old and a new value, divided by the old value and written as a percentage

The numerical example shows the operation and the check in one small case.

A.1 PERCENTAGES AND PERCENTAGE CHANGE

Start by writing the numbers exactly as given. State what is being found, choose the operation that matches the question, calculate one line at a time, and check the size and units of the result. For percentage change, compare the change with the old value. For ratios, compare like quantities. For an equation, perform the same operation on both sides. For a graph, read both axes before reading a point.

Percentage means a number written as a part of 100, shown with the sign %. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Percentage change means the change between an old and a new value, divided by the old value and written as a percentage. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Example. If sales rise from Tk 100 to Tk 120, the change is Tk 20 and the percentage change is $(20 \div 100) \times 100 = 20\%$. The check is that Tk 20 is one fifth of Tk 100.

Ratios, Averages and Rounding is handled by a short procedure and a check.

A.2 RATIOS, AVERAGES AND ROUNDING

Start by writing the numbers exactly as given. State what is being found, choose the operation that matches the question, calculate one line at a time, and check the size and units of the result. For percentage change, compare the change with the old value. For ratios, compare like quantities. For an equation, perform the same operation on both sides. For a graph, read both axes before reading a point.

Ratio means a comparison of two quantities, shown as a:b or as a fraction. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Mean means the sum of a set of values divided by the number of values. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Example. If sales rise from Tk 100 to Tk 120, the change is Tk 20 and the percentage change is $(20 \div 100) \times 100 = 20\%$. The check is that Tk 20 is one fifth of Tk 100.

A.3 REARRANGING AN EQUATION

Start by writing the numbers exactly as given. State what is being found, choose the operation that matches the question, calculate one line at a time, and check the size and units of the result. For percentage change, compare the change with the old value. For ratios, compare like quantities. For an equation, perform the same operation on both sides. For a graph, read both axes before reading a point.

Rounding means replacing a number with a nearby number that has fewer digits, by a stated rule. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Axis means a labelled line on a graph along which a quantity is measured. Use the definition before choosing an operation. Example. If the numbers are 100 and 120, write the old value and new value explicitly before calculating.

Example. If sales rise from Tk 100 to Tk 120, the change is Tk 20 and the percentage change is $(20 \div 100) \times 100 = 20\%$. The check is that Tk 20 is one fifth of Tk 100.

GLOSSARY

Accountability. the obligation to report on results and to accept the consequences The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Administrative management. a view that studies the whole organisation and seeks general principles for managing it The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Alternative. one of the possible courses of action from which a choice is made The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Authority. the right of a manager to make decisions and to direct others, given by the position held The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Axis. a labelled line on a graph along which a quantity is measured (*Appendix A*)

Behavioural approach. the study of how individuals and groups act at work, using methods from psychology and sociology The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Behavioural model. a design that gives weight to the needs, skills and participation of employees and uses fewer fixed rules The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Bounded rationality. the limit on rational choice that arises because people have limited time, information and ability The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Budget. a plan stated in money, or in other numbers, for a period of time The term should be read in the specific management sense established in this chapter. (*Chapter V*)

Bureaucratic model. a design with fixed rules, clear levels, written records and promotion by set standards The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Business ethics. the standards of right and wrong that guide how an organisation and its managers behave The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Centralisation. keeping most decision-making authority at the top of an organisation The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Certainty. a condition in which the decision maker knows the result of each alternative The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Coaching. helping a person to improve skills through guidance, practice and feedback The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Coercive power. power that comes from the ability to punish or to take away what others value The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Conceptual skill. the ability to see the organisation as a whole and to understand how its parts affect one another The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Concurrent control. control applied while work is being done, to find and correct a problem at once The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Contingency approach. the view that the best way to manage depends on the situation The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Controlling. measuring results, comparing them with standards and acting to correct differences The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Coordination. joining the work of different people and parts so that they act together towards the same aim The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Corporate social responsibility. the duty of an organisation to act for the good of society as well as for its own gain The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Corrective action. a change made to bring results back to the standard or to change the standard itself The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Creativity. the ability to produce ideas that are new and useful The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Criterion. a standard used to judge the alternatives, such as cost or risk The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Decentralisation. passing decision-making authority down to lower levels The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Decision. a choice made between two or more alternatives to reach an aim The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Decision maker. the person or group that makes the choice The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Decision making. the process of recognising a problem or chance, finding alternatives and choosing one The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Decision support system. a computer-based set of data and tools that helps a manager study a decision The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Decision tree. a diagram that shows alternatives, chance events, probabilities and results in branches The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Delegation. giving a subordinate the authority to carry out a task while the manager remains answerable for the result The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Departmentalisation. the grouping of jobs into departments by a common feature such as function, product, area or customer The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Deviation. the difference between actual results and the standard The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Division of work. the splitting of a large task into smaller tasks, each done by one person or group The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Economic force. a condition of money, prices, income and trade that affects an organisation The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Effectiveness. the degree to which an organisation reaches the aims it has set The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Efficiency. the use of as few resources as possible to obtain a given result The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Emotional intelligence. the ability to notice and manage one's own feelings and those of others and to use that awareness in dealing with people The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Employee. a person who is paid by an organisation to do work for it The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Environment. all the forces, inside and outside an organisation, that can affect how it works and what it achieves The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Environmental scanning. the steady collection and study of information about outside forces so that changes are seen early The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Expected value. the sum of each possible result multiplied by its probability The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Expert power. power that comes from special knowledge or skill that others need The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

External environment. the forces outside an organisation that affect it and that a manager cannot control directly The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Feedback control. control applied after work is finished, to learn from the results The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Feedforward control. control applied before work begins, to prevent a problem by checking inputs and plans The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

First-line manager. a manager at the lowest level, who directs employees who do the daily work and does not manage other managers The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Flat structure. a structure with few levels and a wide span of management at each level The term should

be read in the specific management sense established in this chapter. (*Chapter IX*)

Formal organisation. the structure that is officially set by management, with defined tasks and lines of reporting The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Functional authority. the limited right of a specialist to direct others in one matter that falls in his or her field The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Functional manager. a manager responsible for one kind of work, such as buying or accounts, across the organisation The term should be read in the specific management sense established in this chapter. (*Chapter II*)

General manager. a manager responsible for all the kinds of work of a unit, such as a branch The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Groupthink. the habit of a close group to agree quickly and to ignore doubts and facts that disturb agreement The term should be read in the specific management sense established in this chapter. (*Chapter VII*)

Hierarchy of needs. Maslow's ordering of human needs in five levels, in which a lower level must be reasonably met before the next one matters The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Hierarchy of objectives. the arrangement of objectives from the whole organisation down to departments and individuals, each supporting the one above The term should be read in the specific management sense established in this chapter. (*Chapter VI*)

Human relations approach. a view that output depends on the needs, feelings and groups of employees as well as on methods The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Human skill. the ability to work with other people, understand them and get good work from them The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Informal group. a set of employees who join by personal choice for companionship, help or shared interest, and not by assignment The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Informal organisation. the network of personal relationships among employees that arises on its own and is not on the chart The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Innovation. the use of a new idea in a product, a service or a method The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Internal environment. the people, structure, rules and resources inside an organisation that a manager can change directly The term should be read in the specific management sense established in this chapter. (*Chapter IV*)

Key area. one of the main parts of an organisation where results must be set because they decide its success The term should be read in the specific management sense established in this chapter. (*Chapter VI*)

Leader. a person who influences others to follow, whether or not he or she holds a managerial position The term should

be read in the specific management sense established in this chapter. (*Chapter XI*)

Leadership. the process of influencing people so that they work willingly towards a common aim The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Leadership continuum. a range of leader behaviour from full manager control to full control by the group, within limits The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Leadership style. the usual pattern of behaviour that a leader shows when influencing others The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Legitimate power. power that comes from the position a person holds in the organisation The term should be read in the specific management sense established in this chapter. (*Chapter XI*)

Line authority. the right to direct the work of subordinates in the main chain of command The term should be read in the specific management sense established in this chapter. (*Chapter IX*)

Line organisation. a structure in which authority passes in one straight line from the top to the bottom The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Line-and-staff organisation. a structure in which line managers direct the main work and staff specialists advise them The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Management. the work of using the resources of an organisation to reach its aims, through four connected functions The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Management by objectives. a way of managing in which managers and employees agree objectives together and judge performance against them The term should be read in the specific management sense established in this chapter. (*Chapter VI*)

Management function. one main kind of managerial work; there are four, and each has its own chapter in this book The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Management process. the continuing cycle in which a manager performs the four management functions again and again The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Management science approach. the use of mathematical models and measured data to solve managerial problems The term should be read in the specific management sense established in this chapter. (*Chapter III*)

Manager. a person who is responsible for the work of other people and for the results of one part of an organisation The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Mean. the sum of a set of values divided by the number of values (*Appendix A*)

Middle manager. a manager between top managers and first-line managers, who turns the direction into plans for one part of the organisation The term should be read in the specific management sense established in this chapter. (*Chapter II*)

Monitoring. the regular watching of performance to see whether work is going as planned The term should be read in the specific management sense established in this chapter. (*Chapter XII*)

Motivation. the inner force that starts, directs and keeps up a person's effort towards a goal The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Need. a lack of something that a person feels and wants to remove The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Needs-goal model. a model in which an unmet need creates a drive, the drive leads to behaviour, and reaching the goal satisfies the need The term should be read in the specific management sense established in this chapter. (*Chapter X*)

Objective. a result, stated directly and with a time limit, that an organisation or person aims to reach The term should be read in the specific management sense established in this chapter. (*Chapter VI*)

Organisation. a group of people who work together in a planned way to reach an aim that one person could not reach alone The term should be read in the specific management sense established in this chapter. (*Chapter I*)

Organisation chart. a diagram that shows the parts of an organisation, the levels and who reports to whom The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Organisation design. the choice of the structure that best fits the aims, size, work and surroundings of an organisation The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Organisation structure. the way in which the tasks, people and lines of reporting of an organisation are arranged The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Organising. arranging the work, people and resources of an organisation so that plans can be carried out The term should be read in the specific management sense established in this chapter. (*Chapter VIII*)

Participation. the sharing of a decision between a manager and the employees who must carry it out The term should be read in the specific management sense established in this chapter. (*Chapter VI*)

Percentage. a number written as a part of 100, shown with the sign % (*Appendix A*)

Percentage change. the change between an old and a new value, divided by the old value and written as a percentage (*Appendix A*)

Performance review. a meeting held at a set time to compare results with objectives and to agree what to do next The term should be read in the specific management sense established in this chapter. (*Chapter VI*)
